## DATA 2000-QUALIFYING BUPRENORPHINE TRAINING

Clinicians who take an online course on providing suboxone/buprenorphine therapy in their practices can qualify for reimbursement. The DATA 2000-Qualifying Buprenorphine Training, administered through an online CME provider with a curriculum developed by the National Institute on Drug Abuse, takes approximately eight hours to complete and can be taken in segments.

Upon completion, clinicians will receive a DATA 2000 waiver, which will allow them to provide the evidence-based and highly effective suboxone/buprenorphine therapy in their practice for patients affected by the opioid epidemic. Reimbursement is available through a grant awarded by HRSA to the Duke University School of Medicine.

**Access the training:**
